# TMC Encryption for Your MultiFM Modulator

Now available for maintech's MultiFM Modulator: TMC messages with encryption. Using the relevant keys, you can simulate various TMC services such as TMCpro, TMobilis, Destia Traffic, V-Trafic, ViaMichaelin, iTMC, Trafficmaster and more.

For transmitting traffic messages according to ISO 14819-6 with your MultiFM Modulator, check the box "Encrypt". Set Country Code (CC), Service ID (SID), Location Table Number (LTN), Encryption ID (ENCID) and the key (Rotate/Shift/Xor).

To a MultiFM Modulator including the RDS and TMC options already, TMC encryption is easy to add. It is available for only 950,- € (plus VAT).

If you want to test the feature without any obligations, please contact us – we will be glad to provide you with a 14 day trial for free.
